Title of Mini project: Construct a four-function Calculator to Evaluate Infix and Postfix Expression.

Objective: Our main objective is to develop a simple calculator using C++. In this project, we will try to make a calculator with four functions. These four-function are addition, subtraction, multiplication, and division. We will also add some extra features along with these four functions. We will add Infix to the Postfix converter and Postfix generator in this calculator.

Tools Required:

1. Software: Codeblocks
2. Language: C++
